

fiberobserver

Control of optical fibers

Plug & Play: fiber testing device - fast and easy to install

Optical control of fibers of the plasmo processobserver series

Universal application due to various adapters for different fiber types

Software for evaluation and data storage

ENGINEERING QUALITY WORLDWIDE

plasmo

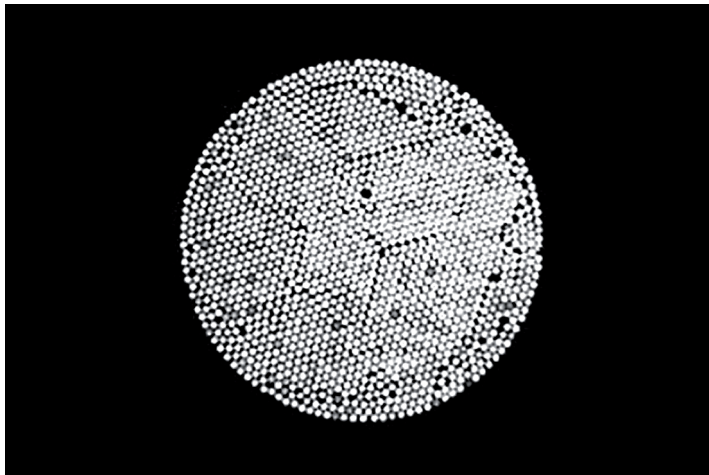

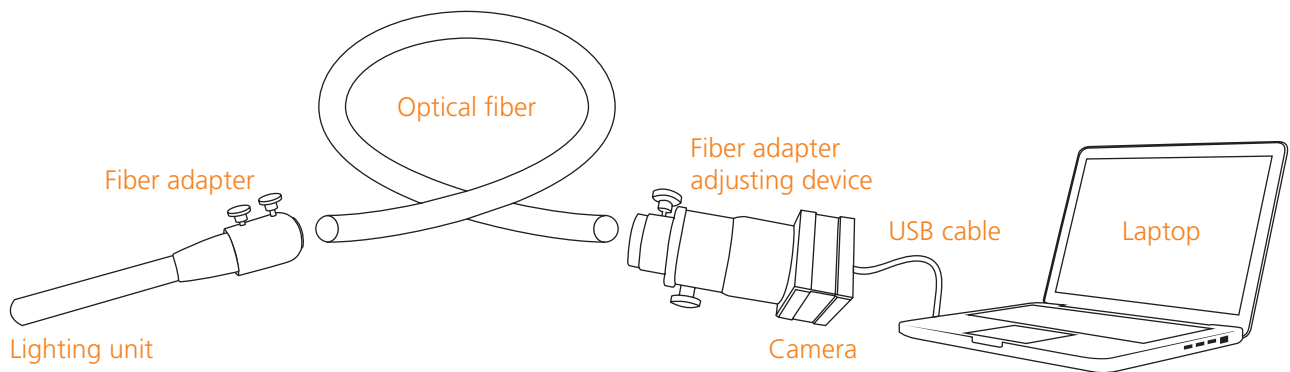

fiberobserver

The plasmio fiberobserver checks the quality of optical fibers which are used for example in the plasmio processobserver series.

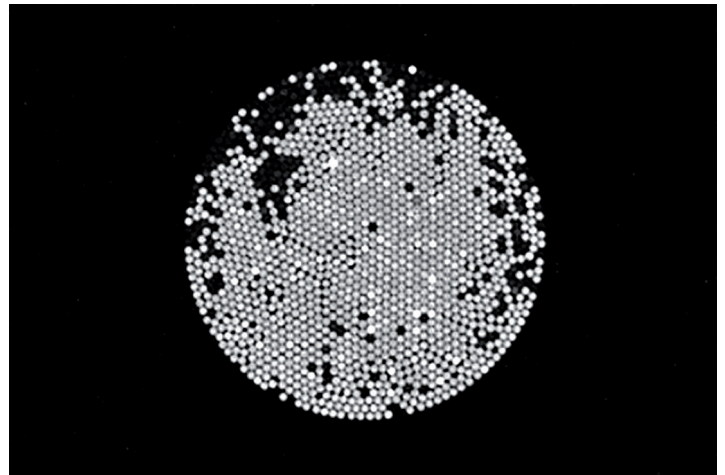

The easily transportable hardshell service case (dimensions approx. 33 x 27 cm/13 x 11 inch) contains:

- Camera with adjusting device
- Different fiber adapters for all types of fibers
- Software for description, administration and data storage of the test results
- Appropriate tools for the use of plasmio fiberobserver

The check is based on the transmitted light method. The smooth quality assurance process of plasmio processobserver series is reliable supported by the plasmio fiberobserver.
