## Applications

### ■ Applications ETFE cables

These cables are used for example in news technologies if high demands for resistance against chemicals and solvents must be fulfilled. Further advantages are the low and high temperature resistance as well as the good electrical insulating characteristics with low, nearly frequency-independent dielectric characteristics.

#### Exemplary applications:

Li7Ybl

Applications in high-frequency and broad-band techniques, coaxial and microwave techniques, high information velocity with exact information transmission at the same time, chemical industry, furnace construction, brick works, heating appliances

### ■ Applications FEP cables

These cables are used for example in news technologies if high demands for resistance against chemicals and solvents must be fulfilled. Compared to ETFE, FEP has a slightly better resistance. Further advantages are the excellent temperature resistance and flexibility at cold temperatures as well as the good electrical insulating characteristics with low, nearly frequency-independent dielectric characteristics.

#### Exemplary applications:

Li6Ybl

Li6Yvz

TA 866 F

TA 867 CF

Applications in high-frequency and broad-band techniques, coaxial and microwave techniques, high information velocity with exact information transmission at the same time, chemical industry, furnace construction, brick works, heating appliances

BL TA 180 C

Our type BI TA 180 C is suitable for extreme environmental conditions. This cable type is designed for use in engine rooms of ships for example as connection cable for the control of marine diesel engines. It is high temperature resistant and shows a very good resistance against oils and chemicals

### ■ Applications PFA cables

These cables are used for example in news technologies if excellent resistance against chemicals and solvents is requested. Further advantages are the excellent temperature resistance and flexibility at low temperatures as well as the good electrical insulating characteristics with low, nearly frequency-independent dielectric characteristics.

#### Exemplary applications:

LiPFAvn

Applications in high-frequency and broad-band techniques, coaxial and microwave techniques, high information velocity with exact information transmission at the same time, chemical industry, furnace construction, brick works, heating appliances
